## Career Objective

Motivated Full Stack Developer with a strong foundation in frontend and backend development. Experienced in building responsive user interfaces, developing scalable backend systems using Django & FastAPI, and integrating LLMs via Groq API, RAG services, and real-time WebSockets. Seeking an opportunity to contribute to real-world projects, strengthen problem-solving abilities, and grow as a professional developer through continuous learning and collaboration.

## Professional Experience

Full Stack Developer Intern, *Bridgeon Solution LLP*

Present

- Assisted in developing backend functionalities using **Python and Django**.
- Implemented database operations and managed data using **Django ORM and PostgreSQL**.
- Worked on authentication systems and role-based access control for secure user management.
- Participated in debugging, testing, and improving backend performance to ensure reliable application functionality.

## Education

Bachelor of Computer Applications (Distance Learning)

2026

Indira Gandhi National Open University (IGNOU)

kerala

*Currently Pursuing*

## Technical Skills

### Frontend Development:

- React
- HTML5
- CSS3 & Tailwind CSS

### Tools & Platforms :

- Visual Studio Code
- Git & GitHub
- Groq API & Postman

### Databases & Storage :

- SQL & PostgreSQL
- Redis (Cache & Broker)
- ChromaDB (Vector Store)

### Programming Languages:

- Python
- JavaScript

### Backend & AI Development:

- Django & Django REST Framework
- FastAPI & RAG Service Architecture
- LLM Integration (Groq API, Llama-3.3)
- Asynchronous Tasks (Celery & Celery Beat)
- Real-time WebSockets (Django Channels & Daphne)
- Authentication & Authorization (JWT, Session, TOTP MFA)
- REST API Development

## Projects

### Project: Student Management System

- Developed a **full-stack student management system** using **Django** and **PostgreSQL**
- Implemented **role-based authentication** with Admin and Student access control
- Designed **public pages** (Home, About, Courses) accessible without authentication
- Developed **protected features** including student profile and course purchasing after login
- Created **student profile management** with details such as name, roll number, department, and admission year
- Implemented **CRUD operations** for student data management
- Built **admin dashboard** with **user management** and **course management** functionalities
- Integrated **file upload** feature for student profile images
- Configured **SMTP email services** for notifications
- Designed **responsive UI** using HTML, CSS, and **template inheritance**

### Project: Full Stack E-commerce Web Application, (Python + React)

- Developed a **full-stack e-commerce application** using modern web technologies
- Implemented secure user registration with **OTP-based email verification**
- Built **JWT-based authentication system** with login and forgot password functionality
- Designed public product browsing (home & product pages accessible without authentication)
- Developed authenticated features including wishlist and cart management
- Implemented dynamic **search functionality** in the navigation bar
- Integrated secure payment gateway using **Razorpay** for checkout process
- Built a protected admin panel with **JWT authentication**
- Developed admin features including dashboard, user management, product management, and order management
- Integrated **Swagger** for API documentation and testing

### **Project: LearnMate AI – LMS & AI Learning Platform (*Currently in Development*)**

**Tech Stack:** Python, Django REST Framework, FastAPI, React 19, Groq API (LLM), ChromaDB, Celery, Redis, PostgreSQL, WebSockets

- Developing a multi-role **Learning Management System** (Student, Mentor, Admin) with **Role-Based Access Control (RBAC)**
- Architecting an **AI-powered RAG (Retrieval-Augmented Generation)** engine using **FastAPI**, **ChromaDB**, and embedding pipelines for contextual lesson assistance
- Integrated **Groq API (Llama-3.3-70B model)** for high-speed LLM inference, delivering real-time, context-aware AI tutor responses from course material
- Implementing **real-time WebSocket chat architecture** using **Django Channels**, **Daphne ASGI**, and **Redis channel layer** for live student-mentor communication
- Integrating **asynchronous background task processing** with **Celery & Celery Beat** for automated job scheduling and queue management
- Building robust security workflows including **JWT Authentication**, **TOTP MFA** (QR code scanning via pyotp & qrcode), and **OTP email verification**
- Developing responsive UI components using **React 19**, **Vite**, **Tailwind CSS v4**, and **Axios** interceptors with token rotation
- Building an **Admin Analytics Dashboard** aggregating platform usage statistics, active user metrics, and MFA enrollment tracking
